Inetum issues a white paper on its next-generation ERP

Inetum, a leader in digital services and solutions, has issued a white paper on a new generation of ERP (Enterprise Resource Planning) that puts the emphasis on communication, collaboration, and business. The goal is to provide more connectivity to businesses by enabling them to adapt to new challenges and needs by transforming their organisational management model.

Faster flows, shortages that need to be dealt with, health and geopolitical threats, cybersecurity – companies face multiple challenges every day that force them to rethink their management model. With Minos UX, a next-generation ERP solution, Inetum offers a management platform that addresses the challenges of the next 10 years.

Agility and digitalisation – creating value for companies

The pandemic has highlighted companies' limits and weaknesses in terms of organisation and information systems. Organisations now realise that choosing the right IT tool can enhance both resilience and agility. More than ever, it is vital for them to use the right tools to meet their challenges and improve digitalisation.

To deal with these issues as well as emerging challenges such as global warming and new geopolitical risks, the IT services company has focused its efforts on developing a connected, collaborative business solution that combines the latest technological innovations – Minos UX.

Minos UX, Inetum's next-generation ERP solution, provides companies with a 360-degree view of their business to anticipate customer demands, improve performance, and control the entire supply chain. Agile, flexible and reliable thanks to its broad functional coverage, Minos UX simplifies business management by centralising, structuring, standardising, and securing all data and functional processes.

Advice and feedback to understand all the aspects of a resilient and responsible supply chain

Inetum's white paper also looks at key supply-chain issues – ERP optimisation, modernisation of industry-specific functions, and the use of innovative technologies are now essential for all companies in the consumer sector. The document brings together expertise and experience, with advice and stories from clients who have developed successfully in their markets and worldwide thanks to the Minos UX solution.

“The multiple challenges that companies face from day to day require them to transform their management model in depth. With this white paper, we want to share our vision of what a company's core information system should look like today, and help companies choose the right directions,” says Pierre Barrat, Head of the Supply Chain Division of Inetum Software.

With the current economic recovery, industrial players must increase their capacities tenfold to adapt to demand, while new and often disruptive players are appearing on their markets. Performance improvement must be part of an intelligent and sustainable supply-chain strategy that can withstand future crises and contribute to a more sustainable economy that creates more value for all.
