

Solution Assessment: Moving smoothly to the cloud with Inetum and Microsoft

inetum 

Are you planning a cloud migration?

To be successful with a cloud migration and achieve the business objectives, a detailed analysis of the current business landscape is needed before starting a cloud migration. **The Migration and Modernization Solution Assessment** of Inetum and Microsoft will give you that insight and provide you with a clear technical roadmap with comprehensive business cases to support your cloud strategy for your IT infrastructure, data, and applications. We use cutting edge tools to make a detailed analysis of your current environment and data estate, based on real-time data

Rely on our proven approach

Our Solution Assessment is specifically designed to thoroughly identify your business needs, determine your best options and prepare you to implement the chosen or required solutions. Since the assessment examines your entire organization, it is also the ideal basis for your next strategic steps.

1 Planning: identify your business needs

We start with identifying and understanding your business goals. This will ensure that our recommended course of action will be aligned with your organization's goals and objectives.

2 Data collection: get a clear picture of your assets

We will perform a detailed inventory of your organization's software and hardware assets, and then conduct a deep dive into your data, including user deployment along with network and system usage.

3 Data analysis: optimize your investments

Based on the analysis and verification of your infrastructure and collected data, we will give you a full view of your current IT environment. From here, we will create a roadmap based on your goals—maximizing the potential of your IT environment.

4 Action: receive your plan of action

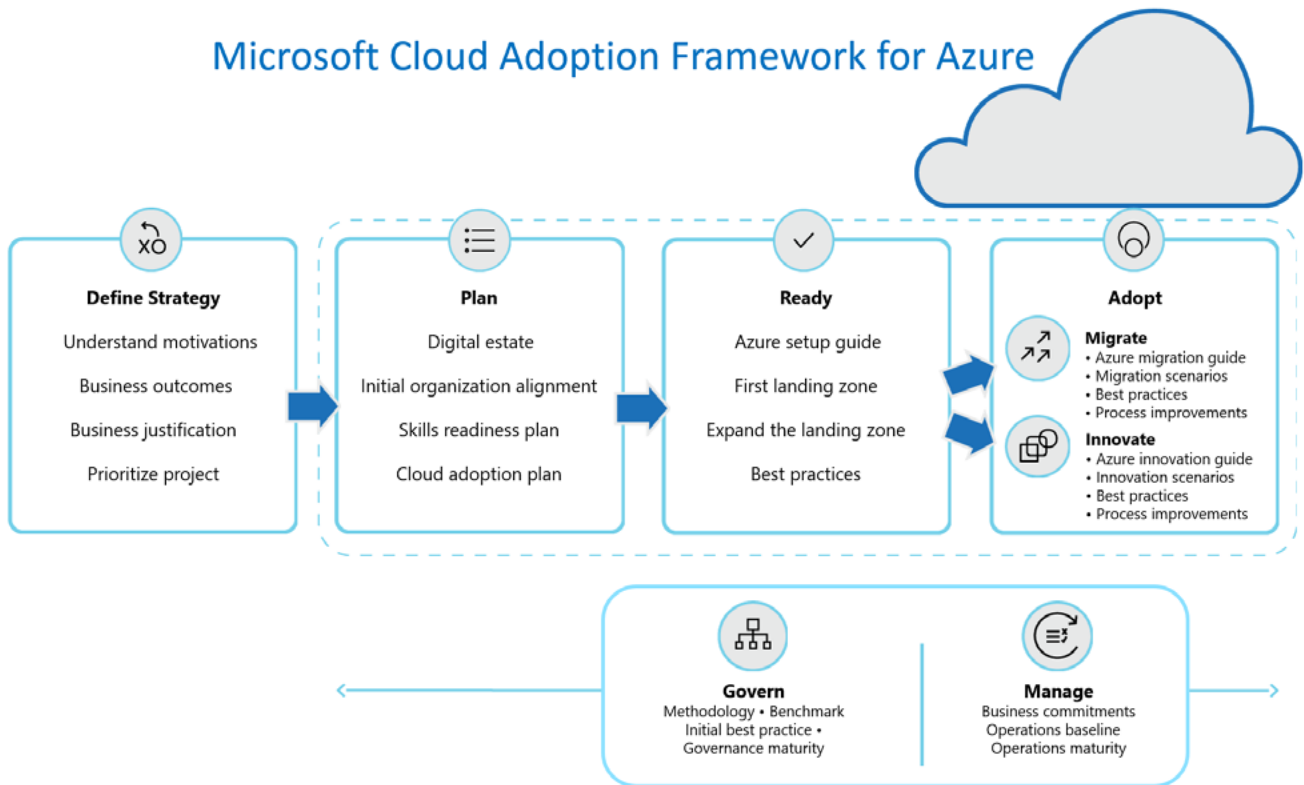

We conclude our Solution Assessment with customized recommendations and next steps, including detailed reports, business cases and a corresponding plan of action.

What happens after our Solution Assessment?

If you want to effectively move to the cloud after the assessment, you can count on Inetum to start your transformation. Based on the results of the Solution Assessment, we determine the next steps within your journey to the cloud. For this, we rely entirely on Microsoft's Cloud Adoption Framework:

- **Ready phase:** the Azure environment is technically prepared to receive workloads. In this phase the foundation layer, called the Azure Landing Zone, is built.
- **Adopt phase:** the effective migration ('Migrate' subphase) or the development and deployment of new workloads ('Innovate' subphase) takes place. This phase also includes the Modernization and Optimization of the workloads so that you can fully enjoy the benefits of the Azure cloud.

Microsoft Cloud Adoption Framework for Azure

Rely on an experienced guide

Inetum is a top Microsoft partner for Azure in Belgium. We have plenty of experienced consultants to guide you on your journey to the cloud. Besides that, we have the highest possible Microsoft Cloud partner certification level. Thanks to that partnership with Microsoft, we can offer this Solution Assessment completely **free of charge** to most organizations.
